

Secrets of Online Stock Market Investment

I would like to share with you some of my secrets ([check our online eBook store for others](#)) of online investment strictly from the comfort of my home, using the Internet, laptop and focused mind. I have made many mistakes, including financial ones. Most important though, I was able to learn from these mistakes, so I regarded my costs as business expenses and necessary sacrifices on my way to where I am going.

My aim in life is to create a masterpiece – something that will continue to grow in generations to come, after I am long gone. Remember, success is over time, not over night. When your plan is clear to you, it will become a generational asset in your family or business. That is what a good person should leave for his children's children! I do not know about you, but I plan to live for a long, long time to come. However, I am in a great hurry to maximize every gift that is in me.

My ultimate long-term goal is to continue been a self-directed investor. This means continual learning, until the chariots swing low and take me away. You see, true success avoids those that will not learn, and whiners are never winners!

Wisdom is training you acquired via someone who has being to where you are trying to reach. Experience is NOT Training! In your journey from here on, remember that every day is a classroom, every experience you go through is a lesson, and everybody you meet is teaching you something, good or bad; pointing you in the right direction or leading astray.

The following keys are our guide for any investment. Take what fits in your plan to create your own masterpiece and continue to win.

1. Be diligent in investing in yourself first! Tomorrow can be a day for others. True success avoids those that will not learn. For example, success in the investment world will be more difficult in the next few years if you are not Internet & IT savvy. Now, that is something to get you thinking!
2. Be extremely stubborn about your vision. Do not be mistaken, no one can fully understand your vision but you. Only reply your critics with success testimonies because dream killer usually comes in disguise of a critique.
3. Never invest in anything that you are not willing to know all about it. Cutting corners with experts' opinions will drown your plan.
4. True success is a network of important relationship building. Do not align yourself with wrong people.
5. Every great investor started with a small opportunity. Nothing arrives big. Anything big that is not tested will not last. That is why 98% of people who win the lottery go broke within two years.
6. Patience is key element of success in Stock Markets or any investment. It is more valuable than gold or oil.
7. In your journey to be successful in the stock market, you must note that every precious stock market strategy is always hidden awaiting your discovery. You must diligently search for it.
8. In stock market, do not be motivated by emotion or intuition. Work your plan and continue to adapt and develop it to continue to win. Your "perfect" plan of last five years may not work this year.
9. 95% of all investors lose money. Mastering PRICE FLOW & TRENDLINES will keep you in other 5% circle of winners.
10. Use Options and ETF (including Inverse ETF) to protect your capital, use EXIT signals to respond to specific market conditions. These conditions are essentially "lines in the sand" serious investors are watching.
11. During market hours only focus on executing your strategy. Market Analysis should be done when market is closed

12. Success in stock market is often about good timing based on price flow and markets trends. Give your trading strategy enough time to work. Trade for profits, over time not over night.
13. You do not make money from stock market predictions, only by trading the market correctly.
14. Successful investors do not work for the money. They work hard with passion for what they are doing & money eventually follows.
15. When trading market instrument, avoid trading noisy top or bottom. Trade the juicy middle.
16. In stock markets, there should be no room for intuition & emotion. Let your ENTRY/EXIT signals lead you.
17. Your stock market strategy must contain how to find WARNING SIGNALS and ACTION SIGNALS. In volatile markets, you must respond promptly to these market turn signals. The key strategy is to use Market instrument PRICEFLOW as EXIT Strategy. These give market turn signals.
18. You must diversify your investment portfolio in the five asset classes - stocks/ETF; Gold; Bonds; oil and other commodities; Currencies; and (of course, cash for living). Your allocation of capital (in percentage form) must be dynamically adjusted according to market conditions.
19. You can now lower your investment risks considerably by trading inverse ETF instead of short selling stocks.
20. Your plan must give you the flexibility to trade in any market conditions, **Up**, **Down** or **SideWays** (lateral).
21. In Stock Market, simplicity of strategy is the most proficient way to invest - that is clarity at its best.
22. Trading Options Online can lower your risks (capital) by up to 70% and still produce similar returns as stocks.
23. Use Gold Strategy to multiply your assets and protect your wealth.
24. Your gifts and talents are linked to seasons. You must continue to train and adapt yourself for new seasons of opportunities that are always before you. Always remember that awesome business ideas are born during an economic turmoil.
